Frequency Specific Microcurrent and the National Football League

Frequency Specific Microcurrent was discovered by the American NFL in 2003. Bill Romanowski brought FSM to the Oakland Raiders with his chiropractor. Tony Parrish and Terrell Owens were treated along with eight linemen from the San Francisco 49ers in August 2003 by Dr. McMakin. Now, NFL teams and athletes from other sports are using FSM in record numbers. The results are impressive and consistent. Chronic injuries clear up in record time. FSM can remodel scar tissue in one sixty minute session that would take months to do manually. New injuries heal in record time. In animal studies, FSM increases the rate of ATP production by 500% and has been shown to reduce inflammation by 62% in four minutes. Imagine these benefits applied to new injuries and you can see why Jeff Spencer takes his FSM training and his FSM units with him when he treats the US Postal team on the Tour de France. When Terrell Owens was injured in December 2004 and wanted to be able to play in the Super Bowl 6 weeks later, FSM was there when he got out of surgery and was a part of the team who made his amazing recovery and spectacular performance possible in Super Bowl 2005. Everyone said the injury needed 13 to 18 weeks to heal and remodel. FSM, Terrell and the treatment team did it in 6 weeks. The National Qualification in Frequency Specific Microcurrent includes frequencies and protocols that are useful in all types of conditions including those particular to athletes.

Case Report Terrell Owens - 2004

- Wide receiver Philadelphia Eagles football team
- 12-19-04 Tore deltoid and interosseous ligaments, fractured fibula
- Surgery 12-21
- FSM three hours later
- Treatment daily with FSM
- Injury should have healed in 13 - 18 weeks
- Used 58/s at 5.5 weeks
- Played in the super bowl 6 weeks after surgery
